

Mexican Ocean AMS

Data warehousing for shipments discharged in Mexico

Mexican Ocean AMS is an internet-accessible data warehouse containing ocean manifest information for shipments discharged in Mexico. Data transmitted or entered into Mexican Ocean AMS is stored, formatted and transmitted directly to Mexican Customs in accordance with their new qualifications. The simple web accessible or desktop loadable interface allows data to be easily entered, validated and managed prior to transmission.

The Mexican Ocean AMS Solution was designed using cutting-edge technologies to process in-bound and out-bound containers with Mexican Customs. The system is wholly compliant with the new mandatory regulations established September 1, 2007 for all Carriers, Forwarders and NVOCC's.

WEB-AMS MX delivers Ocean Manifest, Bill of Lading and Container Information as required by Mexican law to comply with Mexican Customs regulations. All information is transmitted in an encrypted EDI specification prior to receipt by Mexican Customs. Integration across multiple modules eliminates redundant data-entry.

IES Ltd., based in Midland Park NJ, is one of the largest logistics and supply chain software vendors in the US. IES logistics applications automate the documentation, Customs clearance and accounting processes for forwarders, Customs brokers, and NVOCCs. IES' Web-accessible supply chain management systems encompass purchase order and consolidation-warehouse management and inventory allocation. Bar-coding provides cargo visibility through final delivery, avoids data entry errors, reduces domestic handling and labeling costs, and offers last minute allocation flexibility turning vessels into floating warehouses. Automated e-mail alerts and real time Web visibility keep supply chain partners informed throughout the fulfillment and delivery process.

Since 1989, the IES suite of solutions has provided advanced systems to manage their customers' growth, differentiate their service and improve their profitability. IES is known for the complete integration and automation of all aspects of creating, managing and clearing an international transportation shipment. Clearance solutions include AES, ABI, Ocean AMS, Air AMS, Canadian ACI and Electronic In-Bond. IES solutions are available as both a managed service and as packaged software that can be fully deployed in a few weeks. Operated in over 70 countries with thousands of users, IES is the proven solution for the most demanding, mission-critical logistics and supply chain automation needs.

The Software Solution for the Future of Freight

Key Features

The key features of the Mexican Ocean AMS Solution include:

Current Features

- *Easy to use interface with automatic error-checking prior to transmission*
- *Real-Time 24/7 internet access is available*
- *3DES encryption*
- *Lookup tables*
- *Reusable transaction files*
- *Bilingual application*

In Development

- *Data upload specification to eliminate the need to re-key information into Mexican WEB-AMS System*
- *Web Browser Interface*
