*Web-based Application for Trucked Cargo*

## Canadian eManifest

The Canadian Highway Electronic Truck Manifest Program, is a CBSA system designed to replace paper manifests, expedite trade and increase information sharing among government agencies, while enhancing border security.

Trucked cargo manifest information must be received by CBSA into its ACI Highway systems at least 1 hour prior to arrival at a Canadian border crossing. The truck carrier must transmit the manifest electronically or face CBSA penalties. Using IES's web-accessible system dramatically eases compliance with these new regulations.

With the IES Canadian eManifest system, drivers are always kept informed via e-mail or the web. As result, IES customers cross the border with ease, giving them a edge over the competition. Multiple logins allow client access to the system for keying-in shipment details. Save time by importing data via EDI or XML from existing systems into the IES Canadian eManifest application.

Stored shipment, trip, conveyance and equipment details eliminate the need to duplicate data entry. Simply re-use existing information throughout the entire process. This central repository of information also allows for easy monitoring and management of shipments, approvals and status messages while simultaneously reducing border processing time.

The application reuses information through a series of integrated templates, speeding the same data from end-to-end. The intuitive user interface easily guides you through each step, checking for errors both during data entry and upon submission.

Canadian eManifest is one of the available modules in IES's E-Cellerate group of web-based software products. Other E-Cellerate products include modules for ISF compliance, Purchase Order Management, Booking and US Truck ACE. With one consistent, streamlined interface, users can easily maximize the efficiency of workflow processes in a familiar, easy-to-use product. Scalable and flexible, simply add on modules as you grow.

IES is the leading service provider in transportation software, processing millions of encrypted transactions monthly, with direct connection to US And Canadian Systems for ACI, AMS, AES and ABI.

With over 20 years of operation, IES offers one complete transportation logistics software solution scalable to any size operation. IES's product offerings adjust to the changes and complexities inherent when doing business in the global arena. As a result, the suite of IES solutions are among the most customizable and adaptable in the industry.

### Key Benefits

- *Reduce border processing time*
- *Full EDI and XML communication capabilities*
- *Avoid delays, denied entry and penalties*
- *Instantly send notifications to drivers*
- *Stored shipment, trip, conveyance and equipment details eliminate the need to duplicate data entry*
- *Streamlined use of Templates speeds frequently-used transactions*
- *Add on modules as you grow including US Truck ACE, ISF, PO Management and more*
